Allowable Subject Matter

1. Claims 1-106 are allowed.

2. The following is an examiner's statement of reasons for allowance: In the application filed 9/12/2001, applicant claimed a method for producing a pattern film-coated article comprising coating a photosensitive resin which comprises an organometallic or organosilicon compound which is an allyl group-containing metal or silicon alkoxide and a hydrolyzable metal or silicon alkoxide onto a substrate. The examiner performed a search of the prior art of record, and found three relevant references, however, none anticipate or obviate the instant claims. The examiner also considered the references listed on the information disclosure statements and the International search reports, but none of the references cited were applicable. Therefore, the instant claims 1-106 are now allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Hanabata et al (6,183,935 and 6,534,235) are cited for their teachings of a photosensitive resin comprising a condensable (hydrolytic polymerizable) organic metal compound which may be trimethoxysilane, triethoxysilane, allyltriethoxysilane, or allyltrimethoxysilane, however, there is no teaching or suggestion to choose two compounds from the list provided which would

meet the present claim limitations (column 6, line 26 to column 8, line 24; citation from the '935 reference although both have this teaching).

Nakamura (6,632,585) is cited for its teaching of a photosensitive resin comprising a silane compound and a metal compound. The reference fails to teach or suggest the use of an allyl group-containing metal or silicon alkoxide in combination with a hydrolyzable metal or silicon alkoxide.
